

ABSTRACT OF THE DISCLOSURE

[0035] Described herein is the usage of a digital input/output card as an MPEG transport stream. A transport stream feeder for verifying a video decoder is presented. The transport stream feeder comprises a digital input/output card. The digital input/output card comprises a first memory, a processor, and a second memory. The first memory stores a reference video. The processor encodes the reference video. The second memory stores a decoded reference video, the decoded reference video decoded by the video decoder.
